## GRADE 12

## MARKS: 300

## MARKING PRINCIPLES:

1. Penalties for foreign items are applied only if the candidate is not losing marks elsewhere in the question for that item (no penalty for misplaced item). No double penalty applied.
2. Penalties for placement or poor presentation (e.g. details) are applied only if the candidate is earning marks on the figures for that item.
3. Full marks for correct answer. If answer incorrect, mark the workings provided.
4. If a pre-adjustment figure is shown as a final figure, allocate the part-mark for the working for that figure (not the method mark for the answer).
5. Unless otherwise indicated, the positive or negative effect of any figure must be considered to award the mark. If no + or - sign or bracket is provided, assume that the figure is positive.
6. Where indicated, part-marks may be awarded to differentiate between differing qualities of answers from candidates.
7. This memorandum is not for public distribution, as certain items might imply incorrect treatment. The adjustments made are due to nuances in certain questions.
8. Where penalties are applied, the marks for that section of the question cannot be a final negative.
9. Where method marks are awarded for operation, the marker must inspect the reasonableness of the answer before awarding the mark.
10. In awarding method marks, ensure that candidates do not get full marks for any item that is incorrect at least in part.
11. Be aware of candidates who provide valid alternatives beyond the marking guideline.
12. Codes: $f=$ foreign item; $p=$ placement/presentation.

This memorandum consists of 19 pages.

ONE valid reason for changing the stock valuation method:
$\checkmark \checkmark$ Award part-marks for partial answers

- FIFO is a more suitable or accurate or realistic method of valuing stock of blazers.
- Blazers are discrete units where cost is easily identified.
- FIFO is more suitable or accurate or realistic because stock is valued at the most current / changing prices.

ONE valid reason against changing the stock valuation method:
$\checkmark \checkmark$ Award part-marks for partial answers

- It is unethical / fraudulent / wrong / to manipulate financial records.
- Will lead to an increase in tax.
- Inconsistency / It is important that financial records are consistent from one year to the next (comparability).
- Over a period of time there is no difference in the total gross profit earned.

For 2 marks:

- Division of duties so that each person serves as a check on another / get someone else to authorise these transactions.
- Rotate duties so that employees do not have permanent control over an aspect of the business.
- Conduct internal audits / check documents to detect the fraud and errors.
- Physical stock control (to records) / check stock on hand to stock records.
- When goods are received, the receiving officer must check the stock received to the invoice and order form.
- Inform suppliers of the procedure for delivering goods to the business and do not deviate from this.

4.3 At the AGM, a shareholder stated that the Cash Flow Statement reflects poor decisions by the directors. Explain TWO points, with relevant figures, to support his opinion.

Any TWO valid answers: Explanation $\checkmark \checkmark$ Figures $\checkmark \checkmark$

- Dividends of R1 230000 (see 4.2) cause a negative figure for cash retained from operating activities.
- Fixed assets bought are very high (R4 381000 ) (see 4.2) which leads to a bank overdraft.
- The directors allowed a large bank overdraft of R515 000 or R501 500 to result from high payments for dividends/fixed assets.
- The buy-back of shares (R475 000) (see 4.2) reduced cash resources / reduced capital base of the company.
- The vehicle was sold at book value (R106 400) (see 4.2) and was only $11 / 2$ years old.

### 4.5 Comment on the liquidity position of the company. Quote THREE relevant financial indicators (actual figures/ratios/percentages) and their trends.

Any THREE valid financial indicators:
Name of financial indicator
Figure and trend
$\begin{array}{lll}\checkmark & \checkmark & \checkmark \\ \checkmark & \checkmark & \checkmark\end{array}$

- Current ratio: 3,6:1 $\rightarrow$ 1,6:1/decreased to $1,6: 1$
- Acid test ratio: $3,1: 1 \rightarrow 1,2: 1 /$ decreased to $1,2: 1$
- Stock turnover rate: $5,1 \rightarrow 6,8$ times p.a./ increased to 6,8 times
- Debtors' collection period: $35 \rightarrow 40$ days / increased to 40 days

General comment: For 3 marks (need only mention 3 indicators):
The liquidity has generally improved. The current ratio and acid-test ratio were too high in 2013. They are now much more efficient in 2014. The stock is now being sold more quickly which will generate greater profit. However the debtors are paying slightly more slowly - this trend must be rectified next year.

One valid point per indicator OR 3 marks for overall comment:
Excellent answer = 3 marks; Good $=2$; Poor $=1$; Incorrect $=0$
Increases/decreases are not a comment - these are trends
Comment would be on improvement or not / efficiency
Expected responses for 1 mark each:

- The current ratio improved / was possibly too high in 2013 / cash was too high / current assets do not earn any return / they may be more efficient in 2014.
- The acid test ratio improved / is more efficient in 2014 / cash is lower
- The stock turnover rate has improved / stock increased but is being sold more quickly / assists liquidity and is appropriate for a supermarket.
- The debtors are paying more slowly / this trend must be rectified / normal credit terms 30 days.

The directors decided to increase the loan during the current financial year. Quote TWO financial indicators (actual figures/ ratios/percentages) that are relevant to their decision. Explain why this was a good decision, or not.

- Low financial risk / Not making much use of loans (it relies more on funds from internal sources)

## 4.7 <br> The Bakker family owns 740000 shares in this company. Explain the effect that the repurchase of shares on 31 December 2013 had on their control of the company. Give a calculation(s) to support your answer.

Before the repurchase the family's shareholding was:

(Note: Shareholding increased by 1,7\%; this is correct for 4 marks)
The family is now the majority shareholder.

### 6.2 BEN'S CATERING

### 6.2.1 Identify ONE unit cost for doughnuts and TWO unit costs for pies that were major problems in 2014, considering that the inflation rate was $5 \%$.

Identify cost $\checkmark \checkmark \checkmark$ Figures $\checkmark \checkmark \checkmark \quad$ Problem $\checkmark \checkmark \checkmark$ Valid advice $\checkmark \checkmark \checkmark$ Trends not necessary

6.2.2 Calculate the number of extra doughnuts he must produce and sell to make an additional profit of R15000. Assume that the unit costs and selling price for 2014 remain unchanged.
If candidates use alternative methods, search
for key figures to earn marks

6.2.3 Name the product which has been negatively affected by the new competitor.

Pies $\checkmark$
Comment on how this would have affected the net profit on this product.
$\checkmark \checkmark$ Sales \& production decreased ( $44000 \rightarrow 35000$ units) / Ben has had to limit his price (to R12,50) / Reduction in price led to decrease in contribution ( $\mathrm{R} 6,15 \rightarrow \mathrm{R} 4,20$ )
$\checkmark \quad$ Production is less than BEP
$\checkmark \quad$ This means that a loss will be made on the pies.
