MATHEMATICS: PAPER II

MARKING GUIDELINES

Time: 3 hours

These marking guidelines are prepared for use by examiners and sub-examiners, all of whom are required to attend a standardisation meeting to ensure that the guidelines are consistently interpreted and applied in the marking of candidates' scripts.

The IEB will not enter into any discussions or correspondence about any marking guidelines. It is acknowledged that there may be different views about some matters of emphasis or detail in the guidelines. It is also recognised that, without the benefit of attendance at a standardisation meeting, there may be different interpretations of the application of the marking guidelines.
QUESTION 1

(a) (1) (i) \[ \frac{51770561}{9} \] (divide by 9)

\[ = 5752285 \] (2)

(ii) \[ \frac{12272263}{51770561} \] = 23,7% (1)

(iii) \[ \frac{12272263}{18178} \] ≈ 675 people/km² (accept 676 and 675,1) (1)

(b) (1) 2% of 12272263 ≈ 245445 (accept +/- 1) (1)

(2) 10% (1)

(3) (i)

<table>
<thead>
<tr>
<th>Category</th>
<th>Approximate Percentage</th>
<th>Cumulative Percentage Frequency</th>
</tr>
</thead>
<tbody>

(The second mark is awarded, for 90%, given that all other entries are correct) (2)
(3) (ii)

If graph is not cumulative zero marks are awarded
- 2 marks for plotting points. (½ if consistent with midpoint or low point)
- 1 mark for cumulative shape.
- 1 mark for (0;0)

(4) (i) Indicated by A
(ii) Indicated by B

[14]
QUESTION 2

(a)

\[ K \left( \frac{4+12}{2} ; \frac{16+16}{2} \right) \]

(1)

\[ K(8;16) \]

\[ m_{OK} = \frac{16 - 0}{8 - 0} = 2 \]

\[ \therefore \quad y = 2x \]

(2)

\[ m_{OS} = \frac{16 - 0}{12 - 0} = \frac{4}{3} \]

\[ \therefore \quad m_{AT} = -\frac{3}{4} \]

\[ y - 16 = -\frac{3}{4}(x - 4) \]

\[ \therefore \quad y = -\frac{3}{4}x + 19 \]

(3) (i)

\[ \tan \hat{O}_1 = \frac{16}{12} \]

\[ \therefore \quad \hat{O}_1 = 53.1^\circ \]

(2)

(ii)

\[ \tan \left( \hat{O}_{1+2} \right) = 2 \]

\[ \hat{O}_{1+2} = 63.4^\circ \]

Therefore, \[ \hat{O}_2 = 10.3^\circ \]
(iii) AS // x-axis
\[ \hat{R}_1 = 90^\circ - 10^\circ, 3^\circ \quad \hat{K}_1 = 180^\circ - (53,1^\circ + 10,3^\circ) = 116,6^\circ \]
\[ \therefore R_1 = 79,7^\circ \] (3)

(b) Centre of the circle is \((-2; -2)\)
Therefore, equation of circle is \((x + 2)^2 + (y + 2)^2 = r^2\)
Substituting \(B(-8; 4)\), we get \((-8 + 2)^2 + (4 + 2)^2 = r^2\)
\[ r^2 = 72 \]
Therefore equation of circle is \((x + 2)^2 + (y + 2)^2 = 72\)

OR
\[ r = \frac{1}{2}BD \quad \therefore r^2 = \frac{1}{4}BD^2 = \frac{1}{4} \left[ 12^2 + 12^2 \right] = 72 \] (4)

[21]

QUESTION 3

(a) (1) B (1)
(2) E (1)

(b) (1) D (1)
(2) C (1)

(c) (1) \((x; y) \rightarrow \left( \frac{1}{3}x; \frac{1}{3}y \right) \) (description accepted) (1)
(2) \(\) (1)

(d) (1) \((x; y) \rightarrow (-x; -y)\) (2)
(2) \((x; y) \rightarrow (x \cos 210^\circ + y \sin 210^\circ; y \cos 210^\circ - x \sin 210^\circ)\) for 150 or 210
\((x; y) \rightarrow \left( \frac{-\sqrt{3}}{2}x - \frac{1}{2}y; -\frac{\sqrt{3}}{2}y + \frac{1}{2}x \right)\) (4)

[12]
QUESTION 4

(a)  
(1) \( \cos \hat{G} = 0,726 \)  
\[ \hat{G} = 360 - 43,4 = 316,6^\circ \]  
(2) \( \tan \left( \frac{2}{3} \hat{G} + 100^\circ \right) = -1,148 \) (accept -1,1)

(b) \[ \frac{\sin(180^\circ - A)}{\cos(90^\circ + A) + \sin(360^\circ - A)} \]  
\[ = \frac{\sin A}{-\sin A - \sin A} \]  
\[ = -\frac{1}{2} \]  

(c)  
(1) \[ \frac{k}{8} = \frac{1}{4} \]  
\[ \therefore \quad k = 2 \]  
(2) \( OT^2 = 8^2 + 2^2 = 68 \)  
Therefore,  
\[ \sin \beta = \frac{k}{OT} \]  
\[ = \frac{2}{\sqrt{68}} \text{ or } \frac{1}{\sqrt{17}} \]  

(d) \[ \frac{\cos(45^\circ - \theta) - \tan \theta}{\cos 45^\circ \cdot \cos \theta} \]  
\[ = \frac{\cos 45^\circ \cdot \cos \theta + \sin 45^\circ \cdot \sin \theta}{\frac{\sqrt{2}}{2} \cdot \cos \theta} - \frac{\sin \theta}{\cos \theta} \]  
\[ = \frac{\sqrt{2}}{2} \cdot \cos \theta + \frac{\sqrt{2}}{2} \cdot \sin \theta}{\frac{\sqrt{2}}{2} \cdot \cos \theta} - \frac{\sin \theta}{\cos \theta} \]  
\[ = \frac{\cos \theta + \sin \theta}{\cos \theta} - \frac{\sin \theta}{\cos \theta} \]  
\[ = 1 \]  

Expansion Incorrect: Max of 2.
QUESTION 5

(a)  
(1) 120°  
(2) a = 3  
(3) 60°  
(4) b = 3

(b)  
(1) P(60°; 4 \tan 60°) = P(60°; 4\sqrt{3})  
(2) 2 \sin x = 1,5 \cos x  
\tan x = 0,75  
x = 36,87°  
Q(36,87°; 1,20)

(3) Many possible answers, e.g. (15°; 1)  

76 marks
SECTION B

QUESTION 6

(a)

(1) In \( \triangle PSR \),
\[ \hat{P} + \alpha = \theta \therefore \hat{P} = \theta - \alpha \]

(2) \[
\frac{SR}{\sin(\theta - \alpha)} = \frac{PS}{\sin \alpha} \therefore \frac{2 \cos \theta}{\sin(\theta - \alpha)} = \frac{1}{\sin \alpha} \]
\[
\frac{SR}{\sin(180 - 2\theta)} = \frac{1}{\sin \theta}
\]
\[
\sin(\theta - \alpha) = 2 \cos \theta \cdot \sin \alpha
\]
\[
\sin \theta \cdot \cos \alpha - \sin \alpha \cdot \cos \theta = 2 \cos \theta \cdot \sin \alpha
\]
\[
\sin \theta \cdot \cos \alpha = 3 \cos \theta \cdot \sin \alpha
\]
\[
\therefore \frac{\sin \theta}{\cos \theta} = \frac{3 \sin \alpha}{\cos \alpha}
\]
\[
\therefore \tan \theta = 3 \tan \alpha
\]

OR

\( \hat{SRQ} = 0 \)
In \( \triangle PRQ \)
\[
\frac{2}{\sin(\alpha + \theta)} = \frac{1}{\sin(\theta - \alpha)}
\]
\[
\therefore 2 [\sin \theta \cos \alpha - \sin \alpha \cos \theta] = \sin \alpha \cos \theta + \sin \theta \cos \alpha
\]
\[
\therefore \sin \theta \cos \alpha = 3 \sin \alpha \cos \theta
\]
\[
\therefore \tan \theta = 3 \tan \alpha
\]
AC^2 = 50^2 + 30^2 = 3400
AB^2 = 50^2 + 40^2 = 4100
BC^2 = 40^2 + 30^2 = 2500

In \triangle ABC, \quad 4100 = 3400 + 2500 - 2 \times \sqrt{3400} \times \sqrt{2500} \times \cos C

\therefore \quad \cos C = 0,308697...

\therefore \quad C = 72,0192495^\circ

The area of \triangle ABC = 0,5 \times \sqrt{3400} \times 50 \times \sin 72,0192...^\circ = 1386,5 \text{ cm}^2.

[Please note that the students can calculate \cos A or \cos B instead of \cos C.]  

(7) [14]
QUESTION 7

(a) \[ \text{RHS} = \frac{\cos 2A - \cos 4A}{\sin 4A - \sin 2A} = \frac{\cos(3A - A) - \cos(3A + A)}{\sin(3A + A) - \sin(3A - A)} \]

\[ \text{RHS} = \frac{(\cos 3A \cos A + \sin 3A \sin A) - (\cos 3A \cos A - \sin 3A \sin A)}{(\sin 3A \cos A + \sin A \cos 3A) - (\sin 3A \cos A - \sin A \cos 3A)} \]

\[ \text{RHS} = \frac{(2\sin 3A \sin A)}{(2\sin A \cos 3A)} = \tan 3A = \text{LHS} \]

Therefore, \[ \tan 3A = \frac{\cos 2A - \cos 4A}{\sin 4A - \sin 2A} \] (7)

(b) \[ \sin 4A = \sin 2A \]

\[ \therefore 4A = 2A + K.360^\circ; \quad K \in Z \quad \text{or} \quad 4A = 180^\circ - 2A + K.360^\circ; K \in Z \]

\[ 2A = K.360^\circ \quad \therefore 6A = 180^\circ + K.360^\circ \]

\[ A = K.180^\circ \quad \therefore A = 30^\circ + K.60^\circ \] (7)

OR

\[ \sin 4A - \sin 2A = 0 \]

\[ 2 \sin 2A \cos 2A - \sin 2A = 0 \]

\[ \sin 2A(2 \cos 2A - 1) = 0 \]

\[ \sin 2A = 0 \quad \text{or} \quad 2 \cos 2A = 1 \]

\[ 2A = 0 + 180k \quad \text{or} \quad 2A = \pm 60 + 360k \quad k \in Z \]

\[ A = 90k \quad \text{or} \quad A = \pm 30 + 180k \]

OR

\[ \sin(3A + A) = \sin(3A - A) \]

\[ \sin 3A \cos A + \sin A \cos 3A = \sin 3A \cos A - \sin A \cos 3A \]

\[ 2 \sin A \cos 3A = 0 \]

\[ \sin A = 0 \quad \text{or} \quad \cos 3A = 0 \]

\[ A = 0 + 180k \quad \text{or} \quad 3A = 90 + 180k \]

\[ A = 30 + 60k; \quad k \in Z \]
QUESTION 8

(a)

\[ m_{\text{tan}} = -\frac{1}{2} \text{ since tangent at } E \perp y = 2x + 3 \]

\[ y - 0 = -\frac{1}{2}(x - 12) \]

\[ y = -\frac{1}{2}x + 6 \]

For \( E \),

\[ -\frac{1}{2}x + 6 = 2x + 3 \]

\[ -x + 12 = 4x + 6 \]

\[ -5x = -6 \]

\[ x = \frac{6}{5} \]

\[ y = 2 \times \frac{6}{5} + 3 = \frac{27}{5} \]

\[ \therefore E \left( \frac{6}{5}, \frac{27}{5} \right) \]
(b) \[ B(2p; -p) \]

\[ OB^2 = (2p)^2 + (-p)^2 = 5p^2 \]

\[ \therefore \sqrt{5}p = \sqrt{20} + \sqrt{45} \]

\[ \therefore \sqrt{5}p = 2\sqrt{5} + 3\sqrt{5} \]

\[ \therefore p = 5 \text{ (accept } p = -5) \] (5)

(a) (1) \[ x^2 + y^2 + 4x\cos \theta + 8y\sin \theta + 3 = 0 \]

\[ x^2 + 4x\cos \theta + 4\cos^2 \theta + y^2 + 8y\sin \theta + 16\sin^2 \theta = 3 + 16\sin^2 \theta + 4\cos^2 \theta \]

\[ (x + 2\cos \theta)^2 - 4\cos^2 \theta + (y + 4\sin \theta)^2 - 16\sin^2 \theta + 3 = 0 \]

\[ (x + 2\cos \theta)^2 + (y + 4\sin \theta)^2 = 4\cos^2 \theta + 16\sin^2 \theta - 3 \]

\[ r^2 = 4(1 - \sin^2 \theta) + 16\sin^2 \theta - 3 \]

\[ r^2 = 1 + 12\sin^2 \theta \leq 13 \quad \text{for all values of } \theta \]

\[ \therefore r \leq \sqrt{13} \] (5)

[16]
QUESTION 9

(a) \[ \frac{3 + x + y + 12 + 10}{5} = 8 \]
\[ x + y = 15 \quad \ldots \ldots \text{A} \]
\[ \frac{(-5)^2 + (x-8)^2 + (y-8)^2 + 2^2 + 4^2}{5} = 10 \]
\[ (x-8)^2 + (y-8)^2 = 5 \quad \ldots \ldots \text{B} \]

Substituting A into B, we get
\[ (x-8)^2 + (15-x-8)^2 = 5 \]
\[ x^2 - 16x + 64 + x^2 - 14x + 49 = 5 \]
\[ 2x^2 - 30x + 108 = 0 \]
\[ x^2 - 15x + 54 = 0 \]
\[ (x-6)(x-9) = 0 \]
\[ x = 6 \text{ or } x = 9 \]
\[ y = 9 \text{ or } y = 6 \]

(8)

(b) The slowest individual was a boy with a time of 5.2 minutes. That means all the girls were finished before all the boys were finished.
75% of the girls were finished with more than 25% of the boys still needing to finish.

(2)

Bottom 25% of the girls faster than bottom 25% of the boys, etc.
The fastest individual was a boy with a time of 1.5 minutes.
Half of the boys were finished when only one quarter of the girls were finished.

(2) [12]
QUESTION 10

(a) (1) \((x; y) \rightarrow (x - 6; y + 6)\) \hspace{1cm} (2)

(2) \((x; y) \rightarrow (y; x)\) \hspace{1cm} (2)

(b) (1) \(S(-6; 0) \quad Q(-6; -12)\)

\[ \therefore S'(\cos \theta; 6 \sin \theta) \quad Q'(\cos \theta - 12 \sin \theta; -12 \cos \theta + 6 \sin \theta) \] \hspace{1cm} (6)

(2) \[ m_{S'Q'} = \frac{-12 \cos \theta}{-12 \sin \theta} = \frac{1}{\tan \theta} \] \hspace{1cm} OR \hspace{1cm} \[ m_{S'Q'} = \tan(90 - \theta) \]

\[ = \frac{\cos(90 - \theta)}{\sin(90 - \theta)} \]

\[ = \frac{\sin \theta}{\cos \theta} \]

\[ \therefore \text{eqn of } S'Q': y - 6 \sin \theta = \frac{\cos \theta}{\sin \theta} (x + 6 \cos \theta) \]

\[ \therefore y = \frac{x \cos \theta}{\sin \theta} + \frac{6 \cos^2 \theta}{\sin \theta} + \frac{6 \sin^2 \theta}{\sin \theta} \]

\[ \therefore y = \frac{x \cos \theta + 6}{\sin \theta} \] \hspace{1cm} (3)

(3) \[ \text{Area } OBCS' \]

\[ = 2 \times \text{area } OBC \]

\[ = 2 \times \frac{1}{2} \times 6 \times BC \]

\[ = 6 \text{ BC} \]

Since \(y_c = -6\)

\[-6 = \frac{x_c \cos \theta + 6}{\sin \theta} \]

\[ \therefore -6 \sin \theta = x_c \cos \theta + 6 \]

\[ \therefore x_c \cos \theta = -6 \sin \theta - 6 \]

\[ x_c = -6 \tan \theta - \frac{6}{\cos \theta} \]

\[ \therefore \text{Area} = \left[ \frac{1}{2} \times \left( 6 \tan \theta + \frac{6}{\cos \theta} \right) \right] \times 2 \]

\[ = 36 \tan \theta + \frac{36}{\cos \theta} \] \hspace{1cm} (5)

[18]

74 marks

Total: 150 marks
