PLEASE READ THE FOLLOWING INSTRUCTIONS CAREFULLY

1. This question paper consists of 19 pages. Please check that your question paper is complete.
2. All the questions must be answered on the question paper.
3. Read the questions carefully.
4. Use the total marks awarded for each question as an indication of the detail required.
5. It is in your own interest to write legibly and to present your work neatly.

QUESTION 1

(a) On the following pictures (A – C) draw in:

(i) Base of Support (BoS) by using arrows

(ii) Centre of Gravity (CoG) by using a large dot.

Picture A

Picture B

Picture C
(b) Correct the following statements:

(i) The Base of Support (BoS) for the martial art athlete in Picture A is short and narrow, which provides greater stability.

(ii) The wheelchair athlete depicted in Picture C, is least stable as the Base of Support (BoS) is on wheels.

(iii) A skydiver, free-falling head-first, at 9,8 ms\(^{-1}\) towards Earth, has his Centre of Gravity (CoG) above his head.
QUESTION 2

(a) Identify and apply TWO appropriate biomechanical principles to the following situations:

(i) Bracing in preparation for a tackle in rugby.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(ii) Forward thrust of the sprinter at the finish.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(iii) Executing a topspin forehand in tennis.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(iv) Optimum take-off stride for maximum vertical velocity in high jump.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(v) Most effective delivery stride when fast bowling in cricket.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(2)
QUESTION 3

Initially, there were no limits set for the dimensions of a tennis racquet. Nowadays, racquet technology is technically advanced and must comply with the specifications set by the International Tennis Federation (ITF). These are:

- Maximum length: 74 cm
- Maximum frame width: 32 cm
- Maximum head: 870 cm²

Selecting the optimum racquet to complement playing skill level and style remains a challenge.

Refer to the table below and then answer the questions that follow:

<table>
<thead>
<tr>
<th>Specifications</th>
<th>Racquet 1</th>
<th>Racquet 2</th>
<th>Racquet 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length</td>
<td>71 cm</td>
<td>74 cm</td>
<td>71 cm</td>
</tr>
<tr>
<td>Head size</td>
<td>742 cm²</td>
<td>870 cm²</td>
<td>806 cm²</td>
</tr>
<tr>
<td>Weight</td>
<td>340 g</td>
<td>280 g</td>
<td>225 g</td>
</tr>
<tr>
<td>Weight distribution</td>
<td>75% around the head</td>
<td>Even weight distributed throughout the racket</td>
<td>75% around the base</td>
</tr>
</tbody>
</table>

(a) Which racquet would suit a 12-year-old child? Motivate your answer.

___________________________________________________________________
___________________________________________________________________
___________________________________________________________________
___________________________________________________________________
___________________________________________________________________ (4)

(b) Which racquet would suit an adult who is a recreational player and who suffers from elbow pain? Motivate your answer.

___________________________________________________________________
___________________________________________________________________
___________________________________________________________________
___________________________________________________________________ (3)

(c) Which racquet configuration is designed for power? Motivate your answer.

___________________________________________________________________
___________________________________________________________________ (3)
(d) Apart from changing the shape and size of a racquet, what modification can a player make to improve swing efficiency?

___________________________________________________________________
___________________________________________________________________

(1)

(e) Besides the shape, size and weight of a racquet, what else will determine the power exerted by the player on the tennis ball? Provide TWO points.

___________________________________________________________________
___________________________________________________________________
___________________________________________________________________
___________________________________________________________________

QUESTION 6

'Great leaders are like brilliant music conductors – they reach beyond the notes to unleash and extract the magic from their players.'

[Blaine Lee]

(a) Describe the attributes of an excellent leader in a sporting context. Firstly, identify the sporting context of your choice, then mention how leadership styles and communication skills contribute to maximising player performance, time and time again.

(b) The new Australian campaign: *More people cycling more often,* is gaining momentum. Programmes such as: *Ride to Work* and the *Great Victorian Bike Ride* are attracting participants of all ages to cycle regularly.

(i) Provide **TWO** strategies that could be used to increase the number of primary school children that cycle to and from schools in South Africa.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________ (2)
(ii) The Australian campaign is excellent. Nevertheless, children cycling to and from school are at risk. Traffic, state of the roads and driver attitude towards cyclists are examples of potential risks.

Explain how each of the agencies listed below could make cycling safer for children. Identify what each agency could do to ensure safe cycling conditions for children.

QUESTION 8

Hamstring injuries are a common occurrence among rugby players. It is recommended that players follow a sport-specific programme including both stretching and strengthening of the hamstring muscle group, as a way to reduce recurrent injuries.

(a) Identify ONE specific exercise that a fitness coach would recommend to:

(i) Strengthen the hamstring muscle group.

_____________________________________________________________

_____________________________________________________________ (1)

(ii) Stretch the hamstring muscle group.

_____________________________________________________________

_____________________________________________________________ (1)

(b) The hamstring muscle group is involved in flexion of the knee joint.

(i) Name the muscle contraction occurring in the hamstring muscle group during flexion of the knee.

_____________________________________________________________ (1)

(ii) Use the diagrams below to describe the processes occurring in the sarcomere as the contraction identified in (i) occurs.
